

Carpets, Synthetic, Recycling

Natural fiber carpets can be composted. Old synthetic carpets have value as recycled materials. Individual consumers generally can't get rid of a carpet, but you can ask installers and renovation companies if they will do it for you. Don't let a major carpet job go by without asking about recycling! See www.carpetrecovery.org for more information. Good, unused carpet can also be donated to The ReBuilding Center www.rebuildingcenter.org or call 503-445-1520.
